## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-2 are indefinite due to the use of “(20-50°C)” and “(adhesive strength)”. It is unclear to the examiner whether the limitations in parenthesis are part of the claimed invention or not. Clarification of the status of these limitations is required.

Claim 7 recited “a dicing method comprising using the dicing tape” without setting forth any steps involved in the method/process. It is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 7-8 are also rejected under 35 U.S.C. 101 because the claimed recitation in claim 7 of a method of using, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim 8 is further indefinite because it is unclear to the examiner as to and/or of what the attaching and dicing Applicants are trying to claim. Clarification on attaching and dicing is required.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Capote et al. (US Pat. 6,335,571).

Capote teaches a wafer coated with an encapsulant having a thin film of polyimide 37, which in turn, is coated with a thin film of polyimide siloxane thermoplastic adhesive 39. The polyimide siloxane film is between about 5 and 30 microns thick at its thickest point (see Figs. 25 & 28; col. 4, ln. 38-48; col. 7, ln. 18-26, 56-57; col. 15, ln. 44-50; claims 1 & 7).

Although the reference is silent with respect to the peel strength and volume resistivity of the adhesive layer, since the reference teaches the adhesive layer having same thermoplastic adhesive of polyimide siloxane, the adhesive of the reference would inherently have the same properties as those of the presently claimed invention.

Capote further teaches the wafer coated with the encapsulant is put in contact with (attached to) an integrated circuit prior to dicing into individual chips (see Fig. 28; col. 6, ln. 57-58; col. 16, ln. 6).
